SUMMARY

Experienced assistant manager with a strong background in team leadership, process optimization, and data-driven decision-making, developed through roles at Dollar General and Domino's. Recently completed coursework in Java, JavaScript, and React, gaining hands-on experience in building dynamic web applications, debugging code, and working with front-end frameworks. Garrett is excited to bring his problem-solving mindset and technical skills into a collaborative software development environment where he can continue growing as a front-end or full-stack developer.

LANGUAGES | FRAMEWORKS | TOOLS

Java, JavaScript | React | Springboot

EXPERIENCE

Rock Climb Together — LaunchCode Unit 1 Project

- Rock Climb Together is an application made for rock climbers to allow for ease of access to creating and joining events.
 - Designed and implemented event creation functionality using controlled form inputs and form validation.
 - Added filtering functionality to display events by day using front-end conditional rendering and array filtering.
 - Developed user join functionality with dynamic data updates.
- Full Project Tech Stack: JavaScript, HTML, CSS, React.

Assistant Manager — Dominos

September 2023 - September 2024

- Led team of 10+ employees to coordinate daily operations, optimizing shift scheduling, and staff allocation, resulting in major improvements in delivery efficiency and team productivity.
- Analyzed customer order trends using exportable POS reports to identify peak hours and inform staffing models, demonstrating data-driven decision-making and pattern recognition.
- Trained new hires using structured documentation and real-time software tools, demonstrating strong communication skills and ability to explain technical processes clearly.

Assistant Store Manager — Dollar General

May 2021 - September 2023

- Resolved register and back-office technical issues, collaborating with IT support and vendors to troubleshoot POS software, developing comfort with debugging under pressure.
- Utilized digital inventory systems to monitor stock levels and reduce shrinkage, demonstrating data management skills and logical problem-solving under real-world constraints.
- Implemented daily digital logs for shift turnover, improving visibility into team performance and enabling data-backed decision-making.

EDUCATION

LaunchCode, Java, 2025

Pacific High School, 2021
